

Ag Leader[®] Technology

GeoSteer[™] Automated Steering

Simple. Economical. Accurate. GeoSteer bridges the gap between expensive, full-featured systems and less costly steering systems that don't provide the necessary functionality or level of precision desired.

GeoSteer[™]

Benefits:

- **Auto-calibration** through the INTEGRA[™] and VERSA[™] displays makes GeoSteer installation stress-free – even when moving it from vehicle to vehicle.
- **Remote Technical Service** Get customer service from any location. When you use the remote service feature, GeoSteer can be accessed remotely to diagnose the situation in real time so that you can achieve maximum efficiency in the field.
- **Designed for Your Steering Needs** GeoSteer supports the most common and advanced guidance patterns, including SmartPath[™].
- **Compatibility** GeoSteer supports WAAS/EGNOS, OmniSTAR[®] XP/HP and RTK. The GeoSteer also supports GLONASS satellites.
- **High Accuracy** Access to RTK via either RTK radio or via cell modem allows easy access to CORS and other RTK networks. Data plans for RTK network access are available directly from Ag Leader.
- **Eliminate Hassles of Lost Signals** An exclusive Flex Mode allows GeoSteer to maintain accurate steering even when your signal is temporarily lost by automatically transitioning to a different differential signal. When the better differential signal is restored, the system will shift back to the higher accuracy mode.
